

## Did you know?

The outside and inside surfaces of a bubble consist of soap. A thin layer of water lies between two layers of soap molecules, sort of like a water sandwich with soap molecules for bread. They work together to hold air inside. ... Whoosh it through the air so that the bubble follows and grows behind it.

## What you need:

- Dish soap
- Any Dish or Cup (one cup per color is needed)
- Water
- Food Coloring
- A Straw
- Paper
- A Towel You Can Get Dirty

## Steps:

1. Place a towel down to cover and protect the area that you're working. If it's a nice day, head outside and do this in your driveway!
2. Fill your cup about halfway with water. Add 2 squirts of dish soap.
3. Add food coloring of your choice. Mix together until you have soapy, colored water.
4. Put a straw into the cup, and gently blow bubbles. Be careful not to suck in or drink any of the liquid! Blow the bubbles until they reach the top of the cup!
5. Remove your straw and place the paper gently over the top.
6. Set the paper down, and let the bubbles work their magic! After a few seconds, pick the paper back up. You can do other colors on the same page, or leave it to dry.
7. When your paper is dry, you have your art!

Tip: Fold a piece of paper hamburger style to make a card to send!
